

Mecanismos de segurança: CORS, autenticação e autorização

Criptografia de senha e Sequelize

- Tabela de usuários
npx sequelize-cli **model:generate** --name User
--attributes nome:string,login:string,senha:string
npx sequelize-cli db:**migrate**
- Biblioteca bcrypt
npm install **bcrypt**
- **Hooks:** beforeCreate e beforeUpdate

- Models: user.js

```
User.beforeCreate(async(user,options)=>{
  if(user.senha){
    const salt = await bcrypt.genSalt(10, 'a');
    user.senha = await bcrypt.hash(user.senha, salt);
  }
});
return User;
```

- Gerenciamento do seeder

```
npx sequelize-cli seed:generate --name user
```

```
npx sequelize-cli db:seed:all
```

- Alteração do seeder

```
const salt = await bcrypt.genSalt(10, 'a');
```

```
const senhaCripto = await bcrypt.hash('admin123', salt);
```

```
await queryInterface.bulkInsert('Users', [{
```

```
  nome: 'Administrador do Sistema', login: 'root',
```

```
  senha: senhaCripto, createdAt: new Date(),
```

```
  updatedAt: new Date() }], {});
```

```
class UserDAO{
  findByLoginSenha = async(login, senha) => {
    const usuario = await db.User.findOne({where: { login: login }});
    if(usuario){
      const valido = await bcrypt.compare(senha, usuario.senha);
      if(valido) return usuario;
    }
    return null;
  } // create segue o padrão normal
}
```

Limit to 1000 rows

```
1 • SELECT * FROM jogo_dev.users;
```
