The screenshot displays the Swagger Editor interface. On the left, a text editor shows a YAML specification for the Uber API. The specification includes metadata like title, description, version, and host, as well as a path definition for `/products` with a `get` method. The right panel provides a visual overview of the API, including an 'About' section with the API title and version, and a 'Paths' section for the `/products` endpoint. This section details the HTTP method (`GET`), a description of the endpoint's purpose, a table of query parameters, and a section for responses showing the status code `200` and the expected JSON schema.

YAML Specification (Left Panel):

```
1 # this is an example of the Uber API
2 # as a demonstration of an API spec in YAML
3 swagger: '2.0'
4 info:
5   title: Uber API
6   description: Move your app forward with the Uber API
7   version: "1.0.0"
8 # the domain of the service
9 host: api.uber.com
10 # array of all schemes that your API supports
11 schemes:
12   - https
13 # will be prefixed to all paths
14 basePath: /v1
15 produces:
16   - application/json
17 paths:
18   /products:
19     get:
20       summary: Product Types
21       description: |
22         The Products endpoint returns information about the
23         *Uber* products
24         offered at a given location. The response includes the
25         display name
26         and other details about each product, and lists the
27         products in the
28         proper display order.
29       parameters:
30         - name: latitude
31           in: query
32           description: Latitude component of location
```

About

Uber API
Move your app forward with the Uber API
Version 1.0.0

Paths

`/products`

GET Product Types

Description

The Products endpoint returns information about the Uber products offered at a given location. The response includes the display name and other details about each product, and lists the products in the proper display order.

Parameters

Name	Located in	Description	Required	Schema
latitude	query	Latitude component of location.	Yes	
longitude	query	Longitude component of location.	Yes	

Responses

Code	Description	Schema
200	An array of products	JSON Model []
default	Unexpected error
